Research Experiences

AI for Science Mar, 2022 –Present
Shanghai AI Laboratory Shanghai, China
Research Engineer (Full Time)

- AI for Visual Neuroscience
- Multi-Mask Auto-encoder for Structural Variants Detection

Department of Biomedical Engineering Jul, 2021 –Nov, 2021
Southern University of Science and Technology(SUSTech) Shenzhen, China
Research Assistant (Full Time)
Advisor: Quanying Liu, Professor of SUSTech & Huihui Zhou, PI of Pengcheng Lab

- Deep Auto-encoder with Neural Responses
- Detecting out-of-distribution via VAE with reliable uncertainty estimation

Neuroscience and Intelligent Media Institute (NIMI) Sep, 2019 –Jan, 2020
Communication University of China Beijing, China
Research Intern
Mentor: Lihong Cao, Professor of Communication University of China, Chief of NIMI

- Learning the foundations of computational neuroscience such as visual mechanisms, single neuron models (e.g.,Hodgkin-Huxley model, Leaky integrate-and-fire model, Integrate-and-fire model)
- Inspired by concept cells in the hippocampus for continuous learning and adversarial examples

Center for Brain Inspired Computing Research (CBICR) Jul, 2019 –Sep, 2019
Tsinghua University Beijing, China
Research Intern
Mentor: Luping Shi, Professor of Tsinghua University & Chief of CBICR

- Training spiking neural networks(SNNs) by spike-timing-dependent plasticity and spatio-temporal backpropagation
- Data visualization by t-SNE, PCA, and Auto-encoder(AE)

Education

Department of Mathematics Sep, 2017 –Jul, 2019 & Sep, 2020 –Jul, 2021
Chongqing Jiaotong University Chongqing, China
Bachelor of Science GPA: 3.06/5.00

Cold Spring Harbor Asia Aug, 2021 –Sep, 2021
Cold Spring Harbor Laboratory Suzhou, China
AI and Brain Computation Summer School

Department of Biomedical Engineering Jan, 2020 –Jul, 2021
Southern University of Science and Technology(SUSTech) Shenzhen, China
As a visiting student at Neural Computing & Control Lab
Advisor: Quanying Liu, Professor of SUSTech & Huihui Zhou, Professor of Pengcheng Lab

- Mapping V4 to Artificial Neurons via Autoencoder allows Decoding Visual Information
- Deep Generative Model for Out-of-distribution Detection

Tsinghua Laboratory of Brain and Intelligence Aug, 2019 –Sep, 2019
Tsinghua University Beijing, China
CNeuro: Computational and Theoretical Neuroscience Summer School

Research Interests

Generative model, Visual cortex computation, Memory modelling, Continual learning, AI for Science.

Selected Projects and Competitions

2020 Guangdong Academic Forum Jul, 2020 –Aug, 2020

–Biomedical Engineering Brain Science Symposium Southern University of Science and Technology

- I propose a new framework taht utilizes an over-parameterized auto-encoder with V4 neural representation as inputs and the third convolutional layer (Conv3) of AlexNet as the latent code, and then feedforward to the following layers of AlexNet to decode the category of images seen by monkey. The results show that the decoding accuracy of the V4 neural population reached the same level as the categorization accuracy of AlexNet when the neuron number exceeded 200. Our method allows to reciprocally map of neurons between the biological and the artificial neural network.
- Awarded third prize of abstract and prize money ¥600 CNY

2018 International Collegiate Competition on Brain-inspired Computing Jul, 2018 –Oct, 2018
Tsinghua University

- Our team designed and implemented a high-dimensional cross-domain GAN, Weakly Supervised Attention Inference Generative Adversarial Network(WSAI-GAN), successfully visualized the human synesthesia phenomena, and achieved excellent results in some image cross- domain translation tasks.
- As the **only undergraduate** team to awarded third prize of final contest and prize ¥30,000 CNY
